

Matteo Mollano

Brooklyn, New York

☎ (917) 636-9291 ✉ matteomollano@gmail.com [in LinkedIn](#) [GitHub](#) [Portfolio](#)

Education

M.S. in Computer Science

Hofstra University – GPA: 3.92

September 2024 – May 2025

Hempstead, New York

B.S. in Computer Science and Cybersecurity

Hofstra University – GPA: 3.90

August 2020 – May 2024

Hempstead, New York

Certifications: AWS Certified Cloud Practitioner, Terraform Modules/Core Concepts

Skills

Programming Languages: Python, Java, C++, JavaScript, SQL

Cloud & DevOps: AWS, Terraform, Docker, Azure, GitHub Actions, Linux, Bash, PowerShell

Frameworks & Tools: Git, React, Node.js, Flask, Jira, Confluence

Databases: PostgreSQL, MySQL, SQL Server

Work Experience

Systems Engineer I

Elsevier

February 2026 – Present

New York City, New York

- Identified and removed duplicate CloudTrail logs, helping to reduce monthly costs by over \$4000 dollars
- Automated Windows Service updates across 30 EC2 database servers using PowerShell and AWS Systems Manager
- Assisted in migrating logging platform to Coralogix using Terraform-based IaC
- Provisioned Cloudflare BYOIP domains using Terraform and AWS Route 53 hosted zones
- Researched and performed S3 File Gateway upgrades, helping to mitigate potential security vulnerabilities

Coding Instructor

theCoderSchool

October 2022 – Present

Roslyn, New York

- Worked with a student to build and deploy a personal website using HTML, CSS, JavaScript, and a custom domain name
- Delivered Python lessons in data science, enabling students to analyze large datasets and identify trends in data
- Mentored students in web scraping for ETL pipeline development using BeautifulSoup and REST APIs
- Taught SQL fundamentals using PostgreSQL, enabling students to extract valuable insights from structured data

Cyber Security Intern

PKF O'Connor Davies

June 2023 – August 2023

New York City, New York

- Automated alerts for long-running VMs using Python, AWS Lambda, and Google Cloud Functions to reduce cloud costs
- Designed a Python-based CLI tool to simplify Hashcat usage and speed up password hash cracking workflows
- Created a custom Kali Linux image with preloaded pentesting tools, reducing setup time from hours to under 10 minutes
- Built AWS-hosted infrastructure for controlled phishing simulations to assess client employee security awareness

Projects

Machine Learning Network Analyzer | *Scapy, MariaDB, scikit-learn, React, Flask, Mapbox*

Jan 2025 – May 2025

- Designed a machine learning system to detect malicious network traffic using Scapy, MariaDB, and scikit-learn
- Configured a RaspberryPi as a WiFi access point to capture network traffic for analysis using dnsmasq and hostapd
- Developed machine learning models to detect DoS attacks, achieving high accuracy while minimizing false positives
- Built an interactive React UI to visualize real-time network data, model predictions, and IP-based geolocation with Mapbox

Web Vulnerability Scanner | *Java Selenium, AWS (EC2, RDS, S3), Node.js, EJS*

Sept 2023 – May 2024

- Developed automated web vulnerability scans with Java Selenium, detecting 100+ SQLi, XSS, and CMD vulnerabilities
- Engineered a custom crawling algorithm to scan sites and perform 30+ injection attacks per page for security testing
- Performed concurrent testing using 15 AWS EC2 instances, ensuring high scalability and parallel execution
- Stored vulnerability data in AWS RDS (MySQL) and developed a web UI for users to view real-time scan results
